Construction sector

9 questions before your NEOGAGE CFP demo

Before the meeting, consider what you want to calculate and what data you already have. You don't need to prepare full documentation. These questions will help us tailor the demo to your business.

BUSINESS ACTIVITY AND SUBJECT OF ANALYSIS

☐ **1. What does your company do in the construction sector?**
Do you manufacture materials, carry out construction work, develop properties or provide design services?

☐ **2. What exactly do you want to include in the calculations?**
The whole organisation, a construction product, a development project or a specific process?

☐ **3. Which products, materials or projects should the analysis cover?**
For example, concrete, precast components, insulation, steel or a specific construction project.

PURPOSE AND SCOPE OF THE CALCULATIONS

☐ **4. Why do you need carbon footprint data?**
To meet requirements from investors, business partners or contracting authorities, or to pursue your own environmental goals?

☐ **5. What kind of result or document do you need?**
Examples: product carbon footprint, life cycle assessment (LCA) or environmental product declaration (EPD).

☐ **6. Which stages are most important for your analysis?**
Raw material sourcing, manufacturing, transport, construction, use or end of life?

DATA AND EXPECTATIONS

☐ **7. What data does your company already have?**
For example, mix designs, bills of materials or data on energy, transport or waste.

☐ **8. Do you have access to environmental data from suppliers?**
For example, EPDs or information on material composition or origin.

☐ **9. What would you most like to explore during the demo?**
Comparing alternatives, identifying emission sources, preparing reports or streamlining calculations?

> **GOOD TO KNOW** You don't need to prepare full documentation. Tell us what you want to analyse and we'll discuss how NEOGAGE CFP can help in your case.

The main topic I'd like to discuss: _____
